Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>
#include <stdlib.h>

int findFloor(int *arr, int n, int x) {
    int low = 0, high = n - 1;
    int floorIdx = -1;

    while (low <= high) {
        int mid = low + (high - low) / 2;

        if (arr[mid] == x) {
            return arr[mid];
        }

        if (arr[mid] < x) {
            floorIdx = mid;
            low = mid + 1;
        } else {
            high = mid - 1;
        }
    }

    if (floorIdx == -1) {
        return -1;
    }
    return arr[floorIdx];
}

int main() {
    int n;
    if (scanf("%d", &n) != 1 || n <= 0) {
        return 0;
    }

    int *arr = (int*)malloc(n * sizeof(int));
    for (int i = 0; i < n; i++) {
        if (scanf("%d", &arr[i]) != 1) {
            free(arr);
            return 0;
        }
    }

    int x;
    if (scanf("%d", &x) != 1) {
        free(arr);
        return 0;
    }

    printf("%d\n", findFloor(arr, n, x));

    free(arr);
}
```

```
51      free(arr);
52      return 0;
```
