Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
   for (i = 1; i <= num;++i)
   {
    if (num % i== 0)
       {
         printf("%d ", i);
       }
    }
 }
```

Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include<stdio.h>

void Factor(int num){
    int count=1;
    for(int i = 1; i <= num;++i){
    count++;
    count++;

    if (num%i== 0){
        count++;
    }
    }
    printf("%d ", count);

}

int main()
{
    int n;
    scanf("%d", &n);

    Factor(n);

    return 0;
}
```
